

## Macro moth

10) *Sesia bembeciformis* (Hübner 1806), 52.003 Sesiinae. The previous day I had been to see a friend who had put out a lure for this species, I briefly handled the lure. It was hot weather so I slept with the window open, next morning I found this moth on my carpet. Remarkable as I only briefly handled the lure and I am not aware of suitable habitat close to my house. 8/7/23 Northchurch, Herts SP973086
